

# Concepts

## # Concepts

Qortara Governance adds a cloud-native control plane for agent fleet governance.

## ## Core Ideas

- Policy enforcement controls tool calls, data access, and runtime decisions.
- Trust federation lets organizations exchange attestations without sharing internal policy details.
- Compliance evidence turns policy decisions into reviewable audit trails.
- Saga verification ties multi-step workflows to durable governance records.
- Webhooks and events stream governance activity into security operations tooling.

## ## Product Boundary

Microsoft Agent Governance Toolkit can provide a local governance foundation. Qortara Governance coordinates governance across organizations, tenants, and fleets.
