

LangChain Integration

LangChain Integration

Wrap sensitive LangChain tool calls with a Qortara policy evaluation step.

Minimal Pattern

```
```ts
const decision = await qortara.evaluatePolicy({
 agentId,
 toolName,
 inputClassification,
});

if (decision.effect !== 'allow') {
 throw new Error(decision.reason);
}
```
```

Guidance

Evaluate before tool execution, not after. Record the decision ID beside your application logs so security teams can correlate behavior across systems.
